To whom it may Concern

### **M&P Contractors Installation Reference**

EOS Facades and M&P Contractors have been working together for 3 years, successfully completing numerous projects of varying size and complexity. Each project has been completed with the highest level of build quality, not only meeting but exceeding expectations.

The relationship EOS share with M&P has never been stronger. We work together with a wide ranging client base, Bouygues, Willmott Dixon, Morgan Sindall, etc., each having their own set of client needs, programme constraints and end goals.

Projects range from a £35m super school in West Wales, to the construction of four high-rise residential blocks built simultaneously in the middle of a busy city centre.

The EOS steel framing solution is an engineered off-site system which, when used to it's full potential, can introduce significant programme saving benefits. M&P not only have a mutual enthusiasm for this method of construction, they also actively work towards ensuring the EOS system advantages are utilised in every possible way; such as attending design meetings, planning and sequencing the delivery of materials, responding to site tolerances, working closely with our design team, etc.

In summary, the M&P Group are one of EOS Facades most experienced SFS installers. Their principles and visons within the Construction Industry are akin to our own. We look forward to working with them on many future schemes.

Regards
